Our Reviews

Dear Sir, Greetings! I had an opportunity to visit Digital (Virtual) museum created by department of Forensic Medicine, DVVPF's Medical College Ahmednagar and I am pleased to share my experience. Firstly accept my congratulations for such unique concept and for patenting such an endeavor. The museum is divided into 11 sections and all sections are virtual treat. The forensic charts, wet specimens, models, bones photographs, toxicology specimens are well labelled. The most wonderful corner is the collection of soft models. The models are self-explanatory and will help students to understand the theoretical concepts. Three important divisions are - forensic legends, forensic quotes and cartoons explaining medical jurisprudence. These three division of museum are unique and highlights the importance of subject. Students from across the country can benefit from such museum. Most importantly, student can have immediate access to the museum especially during practical examinations.

Testimonials

Our Reviews

I congratulate the team for making a virtual museum. We can see the hard work you have put into in bringing out such clean and detailed pictures. Such high clarity pics are essential in these days of virtual classes. Showing pics of specimens in power point was the routine. But putting them in website systematically will do great benefit to the students. Use of such technology for improving teaching is highly appreciable and inspiring.

Dr. Hema Sundar P.

USING CINEMA AND VIDEO CLIPS IN FORENSIC MEDICINE TEACHING: AN INNOVATIVE APPROACH

Dr. SS Kadu, Dr. (Mrs) SS Kadu, Dr. RR Kunkloll

ABSTRACT:

Context-Cinema and video clips seems to be a promising teaching module in Forensic Medicine. This module has shown to produce permanent impact on students. Study demonstrated its usefulness and effectiveness in students' reflection and professional attitude. It is an innovative approach for gaining students attention. Cinema clips "catches the imagination" and helps to remember facts permanently. It also helps to prepare medical students moral and ethical questions they will face in their professional lives. Our study evaluates impact of this technique on second year M.B.B.S. students.

Impact of Post-lecture Immediate Textbook Reading of Taught Topic on Learning and Knowledge of Health Science Students: An Innovative Teaching-learning Method to promote Excellence in Health Science Teaching

ABSTRACT

Introduction: A lecture is the most widely used teaching method. Learning by lecture is a passive practice. Many pioneering techniques have been used to motivate students to have active attitude toward learning. In this study, teaching the topic and reading the taught topic in the same lecture is used as an innovative technique to teach forensic medicine and toxicology.

Materials and methods: We reconstructed an interactive model of teaching forensic medicine. During 1hour lecture, first 40 minutes were used for teaching the topic by teacher and remaining 20 minutes were given to the students for reading the same topic from Textbooks in lecture time only. To test the effectiveness of the method, we conducted a quasi-experimental study and then the students were asked to write their learning experiences in feedback form by a questionnaire method.

Results: The results of feedback form evaluation revealed that students thought that this method leads to deep learning and understanding the taught topic better. This teaching approach showed that 99% of the students agreed or strongly agreed that learning and clearing forensic medicine concepts are easier in the class-room only. Students also strongly agreed that this method had saved their time and they could make use of this time for studying other subjects. They also found that this method made forensic medicine subject more interesting and attractive. Most of the students agreed or strongly agreed that the method helped them in memory retention.

Conclusion: Teaching the forensic medicine topic by teachers in first 40 minutes and immediately reading the topic by students in last 20 minutes is very effective method in all learning aspects.

INTRODUCTION

Teaching health science subjects in India is largely in the form of instructive lectures which is more teacher-centered. The efforts are being made to make teaching more student-centered. Medical school faculty has to play different roles like, teacher, administrator, assessor, role model, etc.¹

Teaching should be full of ideas instead of overflowing with reality. If students are taught in a way that they will retain information, then in the upcoming time, they will be able to put this knowledge in different circumstances. Lectures are passive for students. Keeping student's attention is a major challenge that teachers have to face. Many new teaching techniques have been used to make these lectures effective, such as role playing, brain storming, and stimulus material.² Group discussions, showing video clips, and problem based learning are different learning methods that make students responsible for themselves and each other. The purpose of this project was to introduce an innovative interactive teaching method in the form of lectures. The specific objectives were to set up a

Lecture is one of the best teaching learning method even in health science education. Lecture is inexpensive, time saving and teacher dominant method. It has its own pros and cons. One of the big disadvantage of lecture is passivity. But passivity can be overcome by using different interactive techniques. With proper preparation; planning and appropriate use of audiovisual aids, lectures can be made more effective and interesting. Considering all above elaborate discussion about lecture, author is confident about wide and multifaceted usefulness of lectures in health science education.

Author has done two educational research projects on how to make lectures more effective and interesting.

- 1) Perception of short cinema and video clips in Forensic Medicine teaching: An innovative teaching learning method.
- 2) Impact of Post-lecture Immediate textbook Reading of Taught Topic on Learning and Knowledge of Health Science Students: An Innovative teaching-learning method to promote Excellence in Health Science Teaching.

4) LEADERSHIP SKILLS IN HEALTH SCIENCE EDUCATION- DR. SANDEEP KADU AS AUTHOR WITH ISBN NO. 978-620-3192766

The term leadership consists of "lead" and "ship" and is about managing people to get the job done. The term leadership can be expanded further as "the process of influencing others to understand and agree about what needs to be done, how it can be done effectively, and the process of facilitating individual and collective efforts to accomplish the shared objectives". Therefore, leadership goes beyond vision into values, aims and goals.

Leaders are not necessarily people who make a paradigm shift. That is unusual. Most people have leadership in them and so leadership is a natural expression and people demonstrate both leadership and situational awareness through emotional intelligence.

I am working as a medical teacher since last 20 years. During my professional career, I realised that as a teacher we have not only to do teaching but also have to work as a leader. With this thought I started updating my knowledge about academics and improving leadership skills. Then I thought that this information can be converted into a booklet.

5) AGRICULTURAL POISON- DR. SANDEEP KADU AS AUTHOR LAMBERT ACADEMIC PUBLISHING.

Pesticides are hazardous to human health and wellbeing. Pesticide traces in food and water are causative agents for chronic health diseases such as immune suppression, hormonal disturbances, reproductive defects, and cancers. Children are at higher health risk of pesticide exposure because of dietary intake as they consume more food per unit body weight as compared to adults. Food samples from India were found to be beyond the permissible acceptable limits. The routine use of pesticides has become an occupational hazard. Pesticides are commonly used as a poison for suicidal purposes in India. It is the second most common mode of suicide in India. The authentic record revealed that self-poisoning deaths are 23,172 per year. Several studies showed that the real number could be three times higher than as quoted. Suicidal and accidental poisoning deaths add up to 80,000 deaths every year. It is due to easy availability of toxic pesticides.

The toxicological pesticide effects caused malnutrition in these Indian communities. Indian farmers also rarely use safety measures due to lack of education, reasonably priced protective equipment, user regulation, and enforcement.

Abstract Title- Dr. Vitthalrao Vikhe Patil Foundations Medical College introduces first digital (virtual) Forensic medicine museum of India-To aid justice to society. Introduction-Museum is an integral tool of learning and teaching. In the classroom, educationalists can present information to students in many ways via lecture, video, or readings. After theory class immediately student can visit museum and see the practical aspects, of the topic. An important role of a museum is to make its heritages become a part of our life, much like the functions of a library. Based on this aspiration, the digital curation of a museum has become an integral part of both the academic and public sectors. Forensic medicine deals with application of scientific medical knowledge in court of law for administration of justice. This subject deals with different medicolegal aspects of medical sciences like different injuries, sexual offences, poisoning cases. Proper knowledge of this subject helps the medical graduate to deposit proper evidence in court of law and thus helps in administrating correct justice to victim. Forensic medicine museum consists of information and its medicolegal aspects of different poisons, weapons, bones, photographs etc. In museum medicolegal charts, different medicolegal wet specimens, models, X- rays are displayed. We have created a website to have a look at this digital museum, and the link for same is-www. v imsfmtm useum .com
Aims and Objectives -To Create first Digital Forensic Medicine museum as educational tool for all stakeholders of medical science and judiciary including medical students, Indian medical graduates, lawyers, judges and public. Conclusion- With Digitalization of our Forensic Medicine museum, it is available on tip of the fingers to all stakeholders of medical science and judiciary. It helps clearing different medicolegal concepts of Indian Medical graduates, lawyers so that it is serving in depositing proper evidence in court of law for administration of correct justice.

ABSTRACT Title of the Invention:-Shanesh's DigiGoniometer Introduction:- Accurate measurement and analysis of joints' range of movement (ROM) are important for assessing joint related health conditions and are valuable to clinicians for diagnostic and rehabilitation purposes. As an alternative to using the camera-based methods which are restrictive and expensive, we have developed the use of microelectromechanical devices such as accelerometers for measuring human joints movement. This patent presents the development of an accelerometer based system to measure range of motion of upper extremities lower extremities. CONCLUSION: This instrument will give the exact (accurate) measurement of range of motion (ROM) and will be more efficient and cost effective than the traditional Goniometer. Thus it will be very helpful for patients for their further prognosis and management at affordable cost.
